

Addresses in RidePilot

Where an address belongs, and why it needs a map pin. For everyone who books trips.

The one rule. An address can only be booked if it has a **map pin**. When you type in the trip form, RidePilot only offers addresses that have one. An address marked **Not on map** never comes up, so it gets saved again and again. You give an address its pin by **picking it from the suggestion list** as you type.

Three kinds of address

Kind	What goes there	Who sees it	Where you manage it
Rider addresses	A rider's own addresses: their home , and places only they go to (their job, a relative's house).	Only when booking that rider .	The rider's page, Addresses panel, Add . Tick Mailing on their home. rp.internal.gcrpc.org/en/customers/.../edit
Saved places	Destinations many riders use: clinics, dialysis, stores, employers, offices. Each has a real name and a group.	Everyone who books, for every rider.	Addresses page, Create Address . rp.internal.gcrpc.org/en/providers/1/addresses
One-off trip addresses	An address typed into a trip and not saved. It belongs to that trip only.	Nobody else.	Nothing to manage. Tick Save to this customer's addresses on the trip if the rider will go there again.

Garages, where buses live, are a fourth kind, kept on Vehicles > Garages by fleet.

How to do it

A new rider

1. **Customers > New**, or open the rider.
2. **Addresses** panel, **Add**.
3. Type the home address and **pick it from the suggestions**.
4. Tick **Mailing** on the home address, then **Save**.

Booking a trip

1. Pick the **rider first**. The search then shows their addresses and the saved places.
2. Not there? Type the full address. The trip form places it on the right street even when the map doesn't know the house number.
3. Tick **Save to this customer's addresses** if they'll go again.

A new clinic or business

1. **Addresses** page, **Create Address**.
2. Give it its **real name** ("DaVita Victoria Dialysis") and the right group.
3. Pick the address from the suggestions. If they don't know it, RidePilot asks the US Census lookup when you save and pins it for you.

Never

- A rider's **home** as a saved place. Saved places are shared with everyone who books, so a home there shows up in every rider's search.
- A **person's name** as a saved place's name.
- A saved place named only by its street address. If it has no business name, it is probably someone's home: put it on that rider.
- Saving the same address again because it says **Not on map**. Fix the one you have (below), or ask GCRPC I.T.

A real example

OCTOBER 2026 · A NEW RIDER IN VICTORIA

A new rider's home was typed onto their record, but the suggestion list didn't offer that house number, so nothing was picked and the home saved **with no map pin**. Trying again, the same address was saved as a **saved place** called "Home", in a group also called "Home". Now the rider's home was in **every CSR's search**, still with no pin, and the rider's trips still couldn't be placed on the map.

There were two more riders' homes in that "Home" group, one of them saved under the rider's own name. And twelve riders added in the two weeks before had homes with no pin, entered by four different people. It wasn't one person's mistake: the rider form gives you no way forward when the map doesn't know a house number.

What to do instead

Keep the home on the rider. One address, on the rider's record, ticked **Mailing**.

If the house number isn't in the list: in the search box type just the street and town ("Mockingbird Ln Victoria") and pick the street. Then type the house number into the **Address** field *below* the search box. The pin stays on the right street, close enough to book and route. (Typing in the search box again clears the pin.)

Already saved without a pin? Open it, pick the address from the suggestions, save. Don't make a new one.

How you'll know

Not on map in red on the Addresses page, or a "couldn't place it on the map" message when you save, means no pin.

Every morning RidePilot checks for addresses with no pin, pinned in the wrong town, saved twice, or far outside our area, and GCRPC I.T. fixes them. The list is at rp.internal.gcrpc.org/en/address_checks

Not sure where something belongs? Ask RidePilot (the button at the bottom right of every page): "where does a rider's home go?"
