

Update your tablet

GCRPC Demand Response and GCRPC Fixed Route · about 5 minutes, before your run. The codes always get the newest version.

Most tablets: open your app. If a blue **Update** bar shows at the top, tap **Update**, then **Install**, and go straight to step 4. Use steps 1 to 3 only if there's no Update bar, or the app is missing.

1 Turn on WireGuard

Open the **WireGuard** app (red dragon icon). Tap the switch next to **tablet-** and your tablet's number so it turns blue. A small key shows at the top of the screen. The links below only work with WireGuard on, or on the office Wi-Fi.

2 Scan the code for your app

Open the **Camera**, point it at the code, and tap the link that pops up. Do the one you drive; most tablets need both.

**GCRPC
Demand
Response**

Door-to-door runs
<http://10.0.0.16/rideavl-pilot.apk>

**GCRPC
Fixed Route**

Route buses
<http://10.0.0.16/gcrpc-fixedroute.apk>

3 Install it

- The browser asks "**Download file?**": tap **Download**.
- Swipe down from the top of the screen and tap the file (**rideavl-pilot.apk** or **gcrpc-fixedroute.apk**).
- If it says the tablet "**is not allowed to install unknown apps from this source**": tap **Settings**, turn on **Allow from this source**, then tap the back arrow.
- Tap **Install**. If "**App scan recommended**" appears: tap **More details**, then **Install without scanning**. These are our own apps.
- Tap **Open**.

4 Finish setting up this tablet

Each app shows a card called **Finish setting up this tablet** (Demand Response: under the sign-in box; Fixed Route: above the route list). Tap each button and do what it says until the card goes away. It removes the old apps (RideAVL, GCRPC Driver), turns on GPS, and sets up WireGuard so the app can switch it back on by itself.

Stuck, or a step won't finish? Leave it and tell dispatch or GCRPC I.T. Your tablet reports which step it stopped at, so we can finish it for you.
